About

Bower on GitHub

@bower

Get support on discord

Support on Bountysource

Bower is used together with other tools to integrate with all sorts of setups and workflows.

Grunt

grunt-bower-concat
Grunt task for automatically concat all installed Bower components.

grunt-wiredep
Inject your Bower components right into your HTML using Grunt.

grunt-bower-requirejs
Automagically wire-up installed Bower components into your RequireJS config. Also available as a standalone CLI tool.

grunt-bower-task
Grunt plugin to automate Bower commands; allow the configuration of the files needed allowing to filter out the minimal in the project.

grunt-preen
A Grunt plugin to preen unwanted files and folders from packages installed via Bower.

Gulp

gulp-google-cdn
Replaces script references with Google CDN ones, based on bower.json

main-bower-files

Iterates through dependencies and returns an array of files defined in the main property of the packages `bower.json`.

preen

A Node.js module to preen unwanted files and folders from packages installed via Bower. Preen can also be used via the CLI.

gulp-bower-normalize

A gulp plugin to copy files into a normalized file structure, arranged by package name and asset type.

Rails & Ruby

bower-rails

rake tasks for Bower on Rails.

d-i/half-pipe

Gem to replace the Rails asset pipeline with a Grunt-based workflow, providing dependencies via Bower.

Rails Assets

Rails Assets is the frictionless proxy between Bundler and Bower.

ruby-bower

Ruby binding for Bower commands (Uses node/execjs instead of shelling out)

spagalloco/bower

Bower integration for your Ruby apps (sprockets).

Java

Dandelion

Dandelion provides an integration with Bower. All Bower components are scanned and automatically converted into vendor bundles. See blog post.

Apps & IDEs

CodeKit

CodeKit is a Mac app that helps you build websites faster and better.

Telerik AppBuilder

Build iOS, Android and Windows Phone 8 hybrid apps using a single pure HTML5, CSS and JavaScript codebase. See blog post.

Webstorm

With integrated Bower package manager, you'll be able to search for, install and manage client-side libraries and frameworks for your project with ease, right in the IDE.

NetBeans

Netbeans can resolve Bower dependencies for you from within the IDE. See blog post

Visual Studio 2015

Visual Studio has built-in support for searching, installation and managing of Bower packages. This includes rich auto-completion in `bower.json` to Bower specific commands and UI elements in Solution Explorer.

Package Intellisense for Visual Studio 2013

NPM and Bower package Intellisense directly in the Visual Studio JSON editor. See blog post.

Everything Else

alfred-workflows

A collection of Alfred workflows that includes Bower integration.

bowerder

The bower components loader for browsers. Easly import components main files to your project.

bowcat

npm package. Quickly concatenate your project's bower

dependencies. Like grunt-bower-concat but without the weight and complexity of grunt.

BowerStatic

Serve Bower-managed static resources using Python WSGI

Pyramid_BowerStatic

Use Bower via BowerStatic with the Pyramid framework

cakephp-bower

CakePHP Plugin for Bower.

kooshy-fe

Integrates a web-based interface for Bower.

paulmillr/read-components

reads root bower.json, opens bower.json of all packages and their dependencies and auto-calculates concatenation order.

SpBowerBundle

Bower integration with symfony2.

octo-linker/github-linker

Google Chrome Extension which links dependencies listed bower.json on GitHub to their project's pages.

sublime-bower

A Sublime text-editor plugin for Bower.

broccoli-bower

Load Bower packages into Broccoli.

less-plugin-bower-resolve

Import Less files from Bower packages.

requirejs-plugin-bower

Requirejs plugin for creating & loading Path/Shim configurations automatically from bower.json dependencies (InBrowser & InBuild)

flask-bower

Flask-Bower is a flask extension to serve bower installed packages - also on Github

brackets-bower

Bower extension for Brackets. It lets you manage your application's

dependencies: search, install, update, remove and more. Support for bower.json and .bowerrc files.

Django-bower

Easy way to use bower with your Django project

vsts-bower

Bower extension for Visual Studio Team Services Continuous Integration builds - also on Github.
